SUMMARY

As a passionate professional in the software engineering space, I thrive on the challenge of building quality into maintainable, scalable, performant software systems that provide solutions to business problems and produce 10x value.

I also enjoy contributing to the overall process of reaching this end goal by building high-performing, cross-functional, collaborative, independent, and responsible teams. Whether it is the establishment of processes, practices, and principles via training and mentoring teams or the direct contribution of architectural design/diagrams and writing clean maintainable code, I have a burning passion for building software.

Outside of work, I enjoy staying current with technology, cycling, and maintaining a healthy work-life balance.

EDUCATION

University of Hong Kong (HKU)

Bachelor's degree, Computer science, 2017

WORK EXPERIENCE

Full stack Developer

Metadata Solutions (Client: Aptive Environmental)

Sep 2023 – Dec 2025

- Built and maintained a **reusable frontend component library**, published to **npm**, to ensure consistency and speed up development across multiple applications.
- Worked closely with designers using **Figma** to translate wireframes into **responsive, accessible, and user-friendly interfaces**.
- Led frontend development efforts by **mentoring engineers, reviewing code**, and setting standards for quality, performance, and maintainability.
- Implemented advanced location-based features using **Google Maps SDK**, including real-time location tracking, custom routing, and interactive polygon drawing on the map.
- Built and integrated backend APIs for event scheduling, including creation, updates, notifications, and **Google Calendar API** sync, ensuring smooth coordination with the frontend and third-party services.
- Built and maintained **mobile applications** using **React Native**, integrating them with backend services and shared APIs.
- Integrated **AI-powered chat assistants** using **LLM APIs (OpenAI GPT)** to enhance customer support, automate responses, and streamline service inquiries.
- Implemented **ML-based route and schedule optimization** to reduce travel time and improve technician productivity.
- Implemented **data analysis and NLP techniques** to extract insights from customer feedback and improve service quality.
- Designed and maintained **scalable database schemas**, focusing on data integrity, performance, and reliability.

- Set up and maintained **CI/CD pipelines** using **GitHub Actions**, with containerized deployments via **Docker** to **AWS Fargate**, and frontend hosting on **S3 and CloudFront**.
- Wrote and maintained **unit and integration tests** to ensure reliability and safe iteration.

Full stack Developer

Aargo Trade

Jan 2021 – Aug 2023

- Designed and developed a secure **admin panel** to support internal operations for a quantitative investment platform, including **revenue calculation, trade performance tracking, and historical data visualization**.
- Implemented **revenue and P&L calculation logic** based on trading activity, fees, account tiers, and strategy performance, ensuring accurate financial reporting for internal stakeholders.
- Built **hierarchical user role management** (Super Admin, Operations, Analysts, Traders) with fine-grained permissions for accessing trading data, reports, and system configuration.
- Developed interactive **dashboards** using **React, Redux, and Tailwind CSS** to visualize key metrics such as strategy performance, execution history, account growth, and revenue trends.
- Integrated **Storybook** to build and document reusable UI components, improving design consistency and accelerating collaboration between developers and product stakeholders.
- Connected frontend applications to backend services via **RESTful APIs**, enabling real-time and historical access to trading data, user activity logs, and financial summaries.
- Implemented **audit logs and activity history views** to track user actions, configuration changes, and administrative operations for compliance and internal review.
- Optimized frontend state management and data fetching to efficiently handle **large volumes of time-series and historical trading data** without degrading UI performance.
- Collaborated closely with quantitative analysts and backend engineers to translate **algorithmic trading workflows** and business logic into intuitive administrative tools.

Full stack Developer

VidGen

Jan 2018 – Dec 2020

- Built and maintained a **multi-role admin panel** (Admin, Advertiser, Publisher, Support) to manage video advertising campaigns, traffic distribution, payouts, and platform configuration.
- Developed core platform features using **PHP (Laravel)** and **Vue.js**, including campaign management, offer configuration, transaction tracking, and real-time performance dashboards.
- Integrated **Voluum API** to track campaign performance, conversions, traffic sources, and ROI metrics across multiple advertising channels.
- Implemented **fraud detection and traffic quality controls** by integrating **Anura** to identify bot traffic, VPNs, and invalid impressions, improving advertiser trust and campaign performance.
- Integrated **Smarty (SmartyStreets) API** for address validation, geo-targeting, and location-based campaign optimization.
- Designed and implemented modules for **Offers, Campaigns, Transactions, Payouts, Settings, and Support**, enabling end-to-end management of the advertising lifecycle.
- Built reporting tools to display **revenue, conversion rates, payouts, and historical performance**, supporting data-driven optimization for advertisers and publishers.
- Implemented **role-based access control (RBAC)** and permission management to ensure secure access to financial data and campaign settings.
- Optimized backend performance by improving database queries, indexing, and API response times to handle high-volume tracking and reporting workloads.
- Collaborated with product, marketing, and support teams to translate business requirements into scalable technical solutions for a video advertising platform.
- Worked in an **Agile/Scrum environment**, participating in sprint planning, backlog refinement, and continuous delivery of platform enhancements.

SKILLS

- HTML, CSS, SASS
- Bootstrap, Tailwind CSS
- JavaScript, TypeScript
- React, Redux, Redux Toolkit, Next.js
- React Native, Expo, Capacitor
- Angular, RxJS, NgRx
- Vue.js, Nuxt.js
- Material UI, Chakra UI, Storybook
- Node.js, Express, NestJS
- PHP, Laravel, Symfony
- Python, Django, Flask, FastAPI
- PostgreSQL, MySQL, SQL Server
- MongoDB, Redis, Cassandra, DynamoDB
- Elasticsearch, Kafka, RabbitMQ, AWS SQS
- RESTful APIs, GraphQL, gRPC, Swagger, OpenAPI, WebRTC, Microservices
- Stripe, PayPal, Google APIs, Firebase
- Jest, Mocha, Cypress, Playwright, Karma, Jasmine, Cucumber
- PyTest, PHPUnit, NUnit
- Pandas, NumPy
- Generative AI, OpenAI API, ChatGPT, LangChain, LLMs, NLP, Machine Learning, TensorFlow
- AWS (S3, Lambda, EC2, Fargate, RDS, DynamoDB, SQS, CloudFront)
- Azure (ADLS, Azure AD, Key Vault, Networking)
- Docker, Kubernetes, Terraform, Jenkins, Maven
- Nginx, Apache

INTERESTS

- Travel
- Sports
